What is claimed is:

1. A method of contact manipulation and retrieval in a communication system, comprising the steps of:

receiving a message having contact information;

converting the contact information to contact data having a predetermined searchable format;

storing the contact data; and

searching the stored contact data;

wherein the contact data is searched for at least one item of information.

- 2. The method according to claim 1, wherein the message is a voice message, and wherein the voice message is packetized to thereby convert contact information in the voice message to contact data.
- 3. The method according to claim 1, wherein the message is a voice message, and wherein the voice message is converted to text as the contact data.
- 4. The method according to claim 1, wherein the message is a voice message, and wherein the voice message is packetized, and wherein the packetized voice message is converted to text as the contact data.
- 5. The method according to claim 1, wherein the system has at least one agent, and wherein the method further comprises providing at least one plug-in that implements conversion and storing of contact data in the communication system;

assigning the at least one plug-in to the agent; and

activating the at least one plug-in for the agent when a message having contact information is received at the communication system.

- 6. The method according to claim 5, wherein the communication system has a plurality of agents and a plurality of plug-ins, and wherein the method further comprises determining for a respective agent of the plurality of agents the at least one plug-in, which is assigned to the respective agent.
- 7. The method according to claim 5, wherein the method further comprises activating the plug-in for the agent when the agent logs onto the communication system.
- 8. The method according to claim 5, wherein the communication system is an automatic call distribution system.
- A method of contact manipulation and retrieval in a communication system,
 comprising the steps of;

providing a plurality of agents and a plurality of format conversion plug-ins;
assigning at least one respective conversion plug-in to a respective agent of the plurality of agents;

receiving a message having contact information by the respective agent;

converting the contact information to contact data having a predetermined searchable format;

storing the contact data; and

searching the stored contact data;

wherein the contact data is searched for at least one item of information.

- 10. The method according to claim 9, wherein the message is a voice message, and wherein the voice message is packetized to thereby convert contact information in the voice message to contact data.
- 11. The method according to claim 9, wherein the message is a voice message, and wherein the voice message is converted to text as the contact data.

- 12. The method according to claim 9, wherein the message is a voice message, and wherein the voice message is packetized, and wherein the packetized voice message is converted to text as the contact data.
- 13. An apparatus for contact manipulation and retrieval in a communication system, comprising:

means for receiving a message having contact information;

means for converting the contact information to contact data having a predetermined searchable format;

means for storing the contact data; and

means for searching the stored contact data;

wherein the contact data is searched for at least one item of information.

- 14. The method according to claim 13, wherein the message is a voice message, and wherein the apparatus further comprises means for packetizing the voice message to thereby convert contact information in the voice message to contact data.
- 15. The method according to claim 13, wherein the message is a voice message, and wherein the apparatus further comprises means for converting the voice message to text as the contact data.
- 16. The method according to claim 13, wherein the message is a voice message, and wherein the apparatus further comprises means for packetizing the voice message, and means for converting the packetized voice message to text as the contact data.
- 17. The method according to claim 13, wherein the system has at least one agent, and wherein the apparatus further has:

means for providing at least one plug-in that implements conversion and storing of contact data in the communication system;

means for assigning the at least one plug-in to the agent; and

means for activating the at least one plug-in for the agent when a message having contact information is received at the communication system.

- 18. The method according to claim 17, wherein the communication system has a plurality of agents and a plurality of plug-ins, and wherein the apparatus further comprises means for determining for a respective agent of the plurality of agents the at least one plug-in, which is assigned to the respective agent.
- 19. The method according to claim 17, wherein the apparatus further comprises means for activating the plug-in for the agent when the agent logs onto the communication system.
 - 20. The method according to claim 13, wherein the communication system is an automatic call distribution system.
